

Dear Sir or Madam,

I am writing to you regarding the Soil Enrichment Protocol to ask about the extent of aggregation. The following screenshot is taken from the latest public webinar slides.

- [No limit on number of fields or combos of crop/region/practice in an aggregate](#)

Would it be possible to aggregate any number of fields across the United States into one project as long as the same practice (e.g., no-till, cover cropping) is conducted on all the fields? What would be reasons fields cannot be grouped into one project?

Thank you very much

Florian Forster
