RESERVE

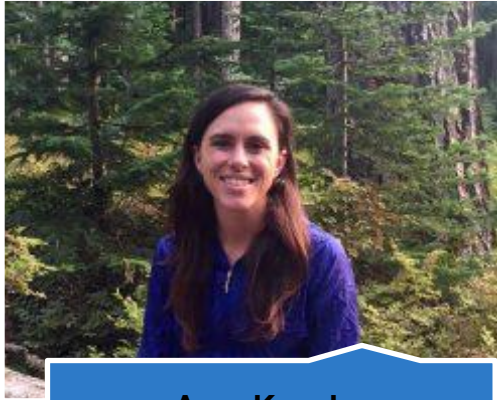

Guatemala Forest Protocol V1.0 Kick-Off Public Meeting

March 29, 2023

Introducción

CLIMATE
ACTION
RESERVE

Amy Kessler
Director of Latin America

Claudia Jurado
Analytical Associate, Latin
America

Miguel López Delgado
Analytical Manager, Latin
America

Celeste Meléndez
Analytical Associate, Latin
America

Jon Remucal
Associate Director of Nature
Based Solutions

Abbey García
Analytical Associate, Latin
America

- All attendees are in listen-only mode
- Please submit your questions in the Zoom question box and we'll try to answer them at the end, time permitting
- We will follow up via email to answer any questions not addressed during the meeting
- The slides (in Spanish and English) and a recording of the presentation will be posted online on the Climate Action Reserve webpage:
<https://www.climateactionreserve.org/how/protocols/ncs/guatemala-forest/dev/>

Agenda

1. Presentations
2. The Climate Action Reserve
3. Logistics of the Working Group (WG)
4. Objective and purpose of the Guatemala Forest Protocol and timeline
 - **Note: April 7 is the due date to send the Statement of Interest (SOI) to be part of the Working Group**
5. Review considerations
6. Questions, comments, and next steps

THE CLIMATE ACTION RESERVE

The Climate Action Reserve

CLIMATE
ACTION
RESERVE

NGO founded in 2001

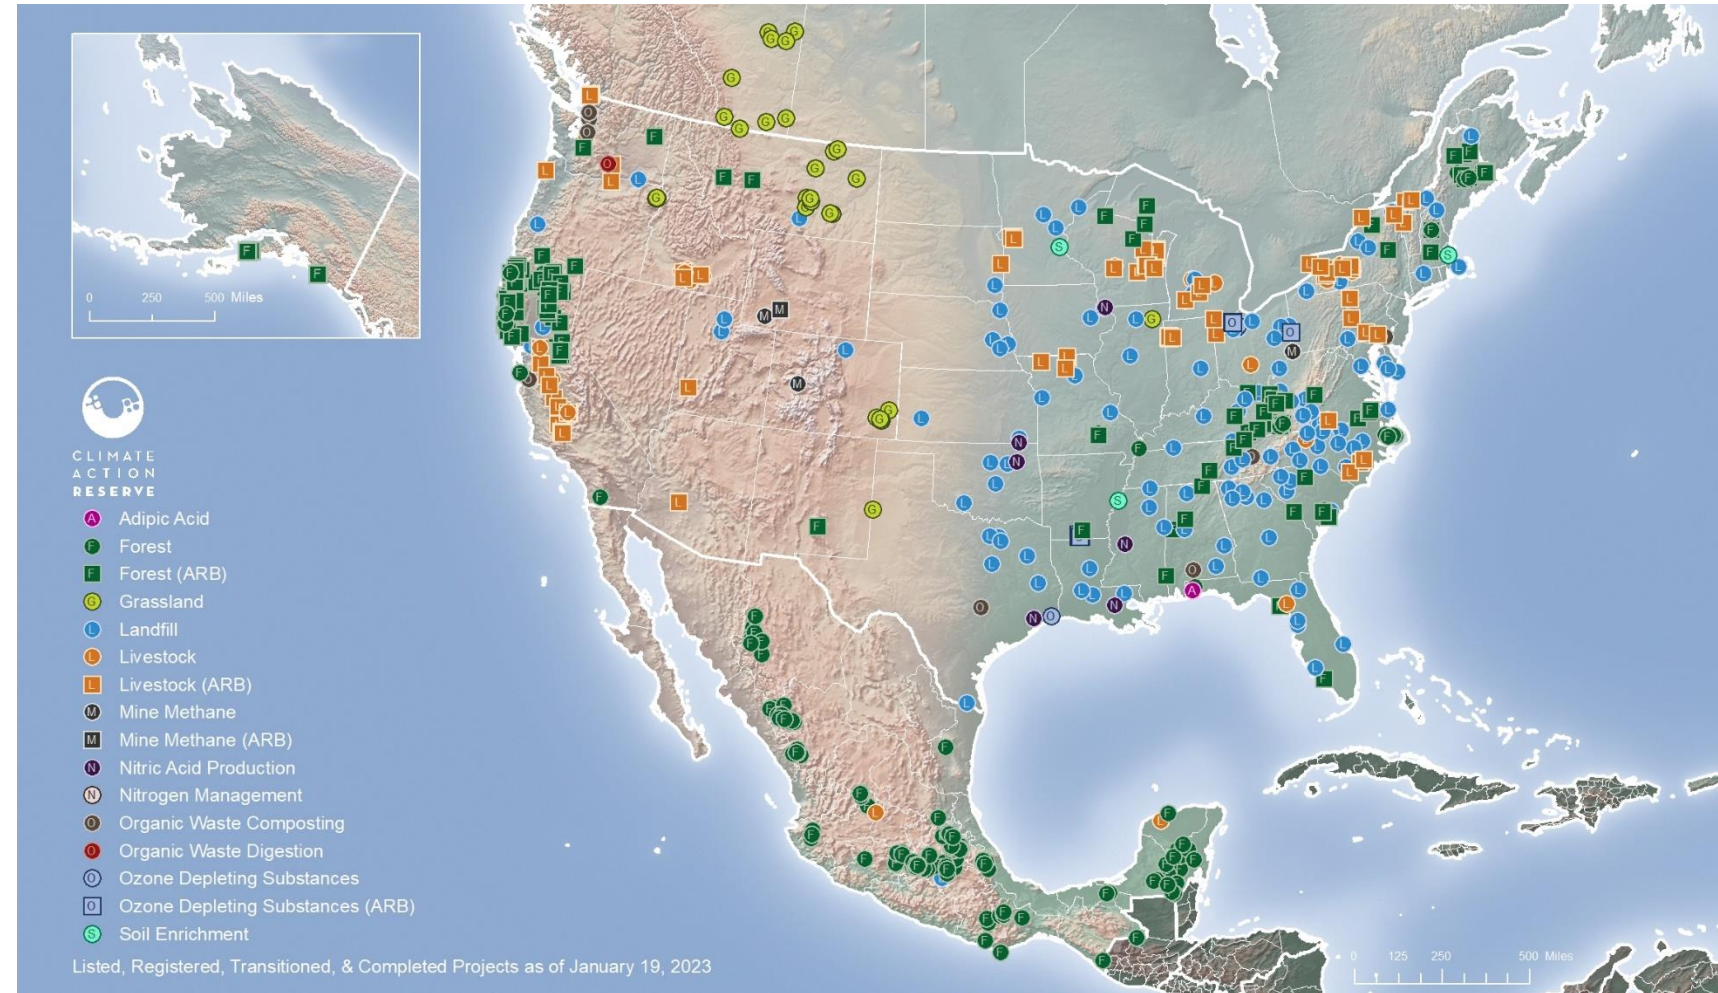

22 offset protocols: Mexico, USA, and Canada

>550 Projects y 187M+ offset credits issued

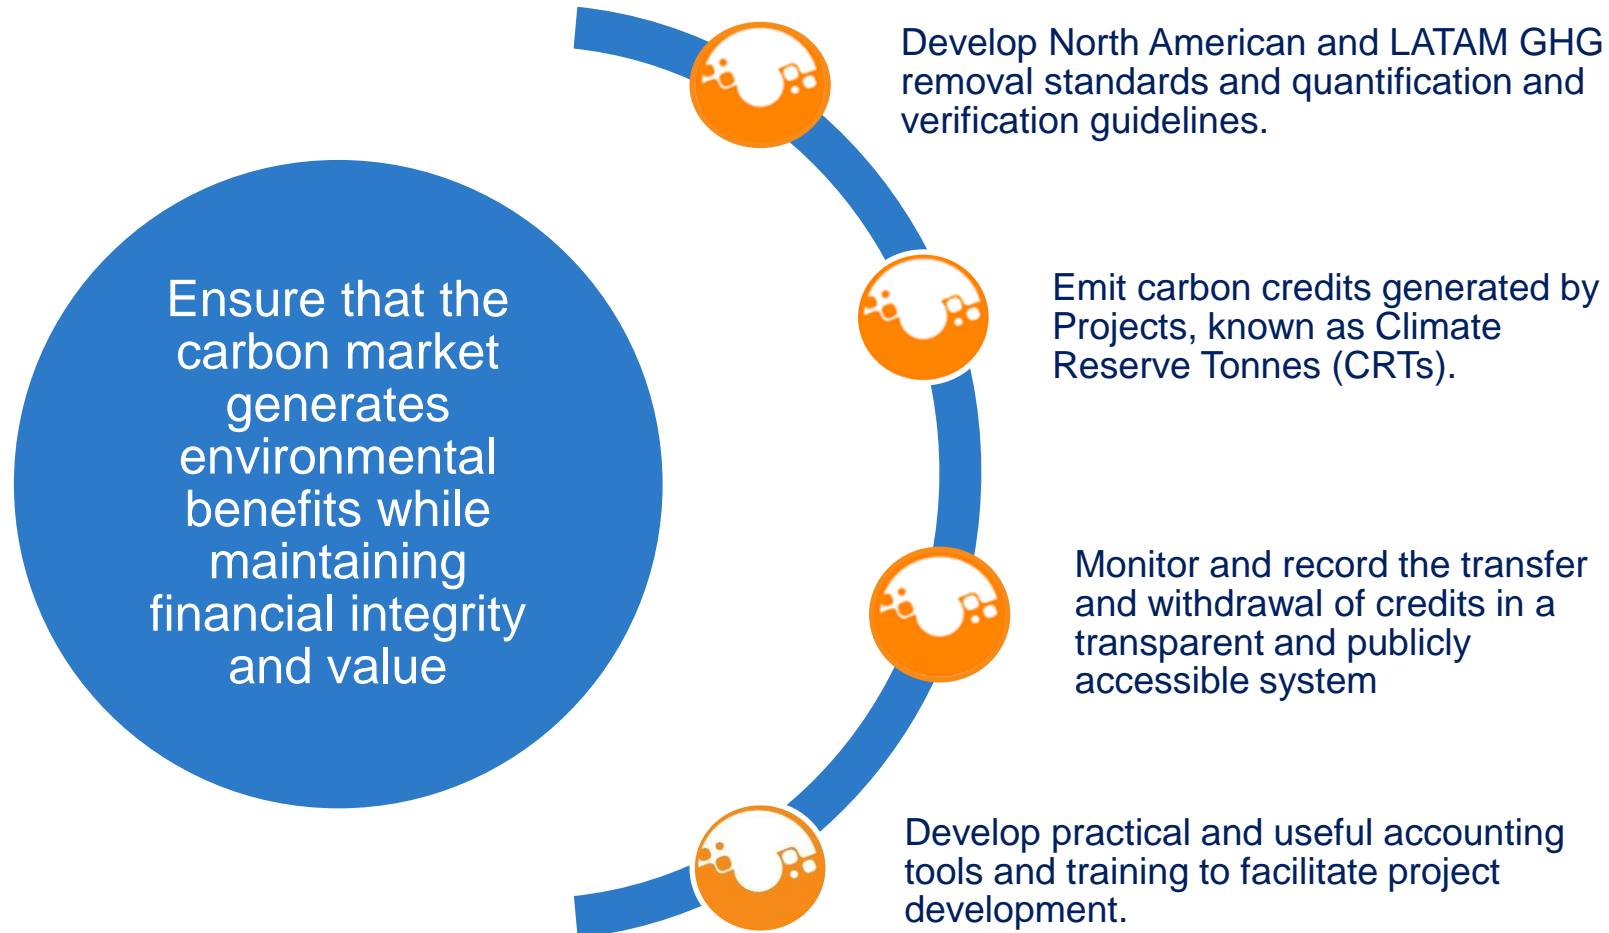

Mission: to promote market-based solutions

The Climate Action Reserve

CLIMATE
ACTION
RESERVE

Principles of the Reserve Program

All registered projects and credits issued by the Reserve must be:

ADDITIONAL	VERIFIED	REAL	PERMANENT	ENFORCEABLE
<ul style="list-style-type: none">• Beyond common practices• Beyond regulatory requirements	<ul style="list-style-type: none">• Standardized eligibility criteria and quantification methodologies• Independent third-party review.	<ul style="list-style-type: none">• Conservative emissions accounting• Prescriptive models and equations• Uncertainty reduction	<ul style="list-style-type: none">• Monitoring and reporting processes• Any leakage or loss is quantified and compensated	<ul style="list-style-type: none">• Processes to ensure program compliance• Accountability mechanisms

- The Reserve seeks to be practical and ensures that projects do not have negative impacts
- The standards include social and environmental safeguards to ensure the participation and benefit of the participants

Two elements:

- Determination of project eligibility and additionality using standardized criteria rather than project-specific assessments.
- Quantification of GHG reductions/removals through a baseline established under certain assumptions, emission factors and monitoring methods.

Objectives:

- Minimize personal judgment in project assessment
- Reduce transaction costs for the project developer, minimize uncertainties for investors, and increase the transparency of the project when it is approved and verified

Rigorous, Inclusive and Transparent Process for the the Protocol Development

Inclusive Process: A balanced multi-stakeholder working group is formed with industry and jurisdiction experts, government agencies, environmental organizations, and other stakeholders.

- Stakeholders that are not part of the working group can still participate in the process as “observers”.

Transparent Process: All working group meetings and webinars for the public comment period are recorded and posted on the website along with the drafts

Development process

GUATELAMALA FOREST PROTOCOL

Formation of the Working Group

- Stakeholder participation and feedback is critical to protocol development
- The Reserve assembles an intensive multi-stakeholder working group to advise on protocol development and produce rigorous, well-vetted, and credible protocols.
 - Strive for balanced representation from the forest sector, project developers, environmental NGOs, verification bodies, independent consultants, academia, and government agencies.
 - Interested parties are invited to submit a Statement of Interest (SOI)

The deadline to submit the local engagement form or SOI is April 7, 2023

The SOI can be downloaded here

<https://www.climateactionreserve.org/wp-content/uploads/2023/02/GFP-Workgroup-Statement-of-Interest-Form-English-2.docx>

- Requires commitment to ~3-4 working group meetings plus additional protocol reviews, familiarity with the feedstocks, technologies, and/or end uses for which the protocol is being developed, and a strong understanding of GHG accounting based on carbon projects.

Statement of Interest and Local Engagement

Statement of Interest – Workgroup

- Form for interested parties wishing to join the workgroup
- Selected members will commit to: Participate in meetings, provide comments, review protocol, actively participate during workgroup meetings
- Only 15-30 participants will be selected
- An email will be sent out to selected candidates
- Stakeholders not selected in the workgroup may be included as “observers”
- **Deadline: April 7, 2023**
- **Link:**
<https://www.climateactionreserve.org/how/protocols/ncs/guatemala-forest/dev/>

Local Engagement

- Participate as an observer during the development of the protocol
- Observers will receive invitations to the workgroup meeting, but participation is limited to silent mode with the opportunity to send comments via chat
- Can submit comments during the public comment period
- **Deadline: ongoing**
- **Link:**
<https://www.climateactionreserve.org/wp-content/uploads/2023/02/GFP-Workgroup-Statement-of-Interest-Form-English-2.docx>

Working Group Process and Expectations for Working Group Members

Process

- Reserve staff identify and request feedback on specific protocol criteria
- Reserve staff schedule meetings (~3-4)
- Reserve staff produce a draft protocol for your review
- Reserve staff revises protocol based on feedback

Expectations

- Review, comment, and provide recommendations on specific protocol criteria.
- Participate in meetings via webinars
- Provide written comments on the draft protocol.

Timeline

Step	Details	Mar	Apr	May	June	July	Aug	Sep	Oct
Formation of the Working Group	Kick off meeting	29							
	Due date to submit the SOI: April 7		7						
Workgroup	Meeting I		26?						
	Meeting II								
	Meeting III								
Draft Protocol Development									
Work Group Review									
Public Comment Period	Periodo de Comentarios Públicos								
	Review of comments and update of the protocol								
Approval by the Board of Directors of the Reserve	October 2023								4

Financial and Technical Support

Partial funding and technical support was provided by:

CARBON MARKET

What are carbon markets?

- Carbon markets are trading systems in which carbon credits (generated by unregulated sectors) are sold and bought
 - Each carbon credit is equivalent to 1 ton of CO₂e reduced or removed from the atmosphere

Buyers are those who emit GHG into the atmosphere and want to offset their carbon footprint →

← Sellers are those who reduce or remove CO₂ emissions from the atmosphere. For example, forest owners carry out actions to promote tree growth.

What is an offset credit project?

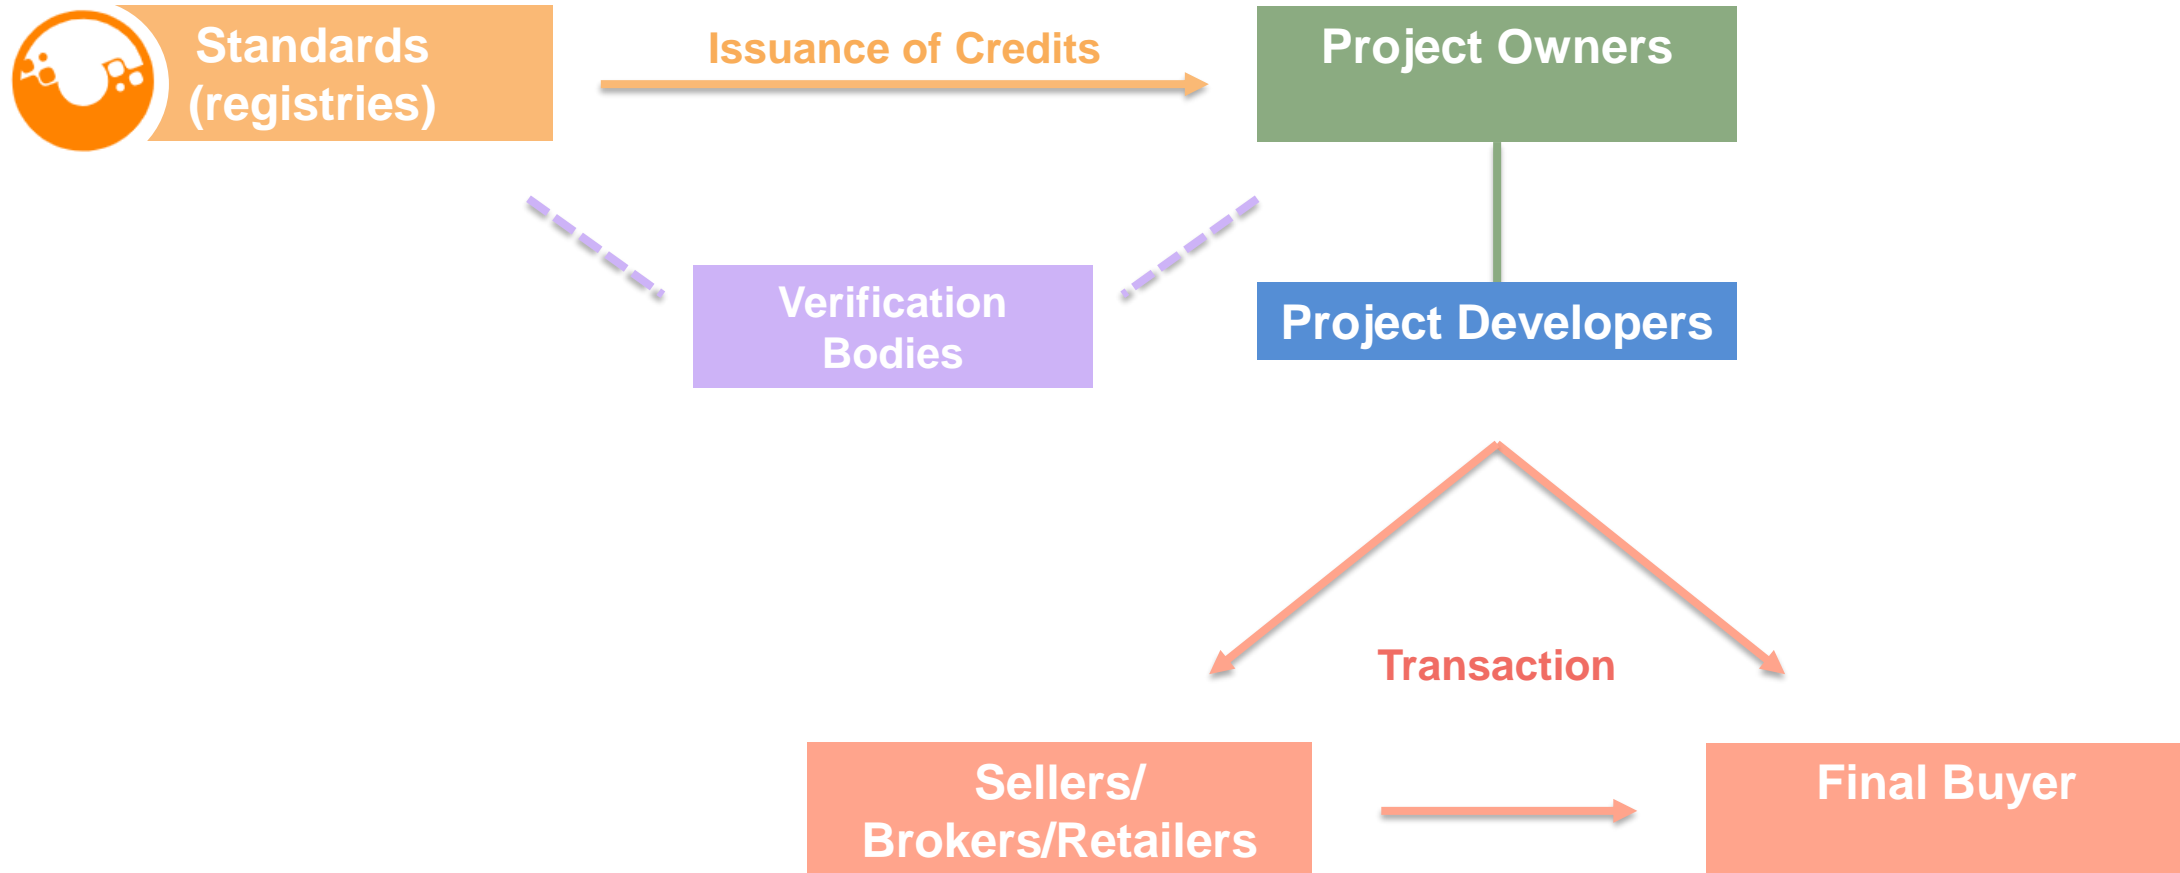

An offset credit project is an activity or set of activities that:

- reduce GHG emissions,
- they increase the sequestration or storage of carbon removed from the atmosphere.

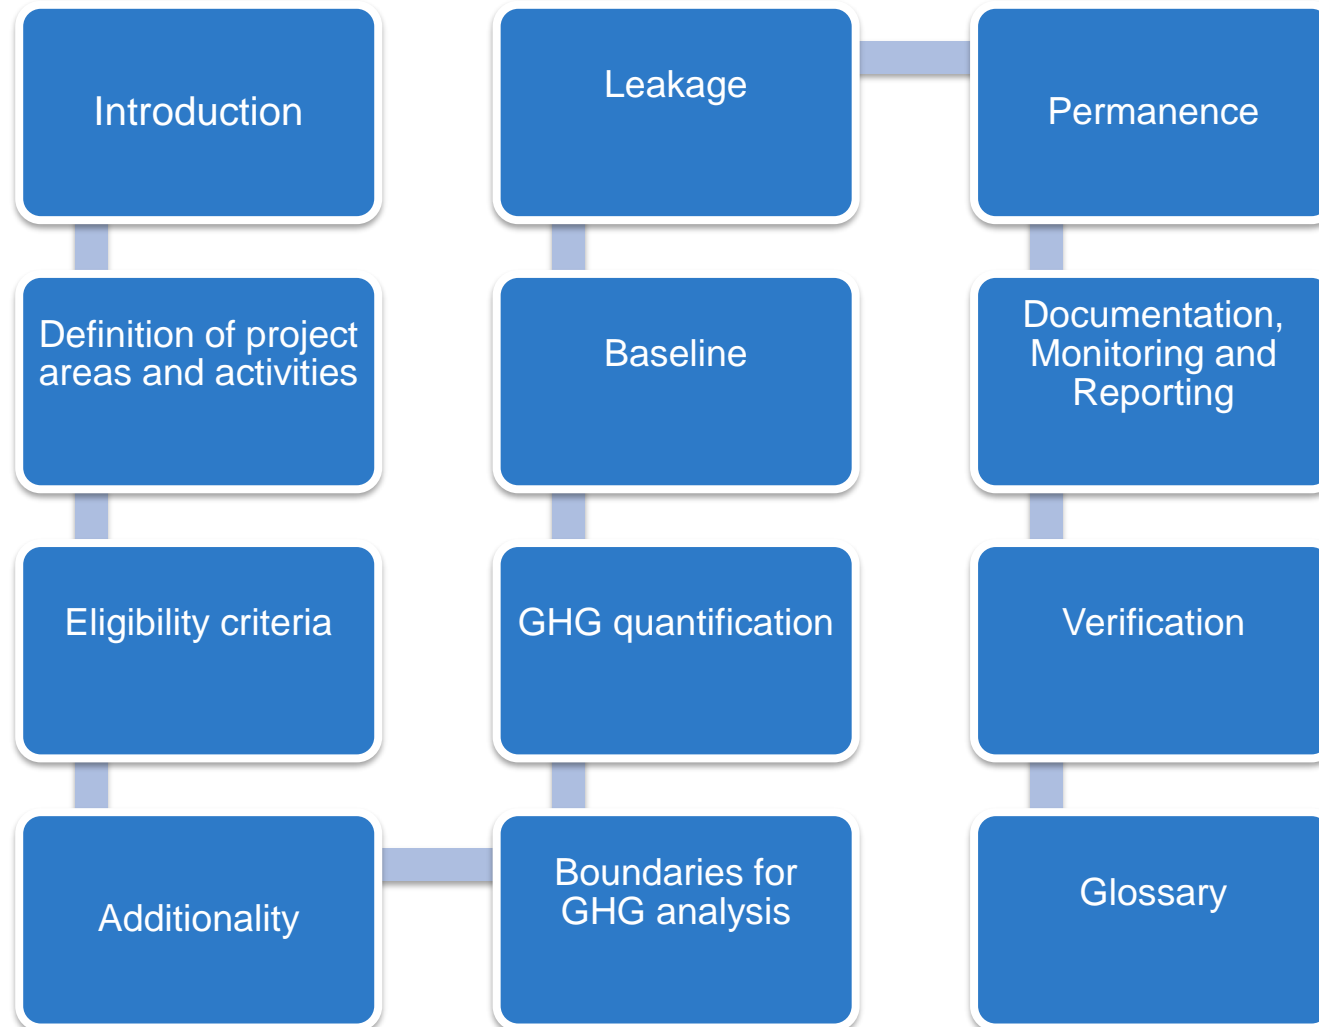

Carbon Market Actors

The Role of Carbon Project Protocols

- They are guides that can be used for generating **carbon credits** that can be sold on voluntary or regulated carbon markets.
- They provide **confidence to buyers** that **high-quality carbon credits** are purchased.
- They address **GHG accounting principles** (for example, additionality).
- They present the quantification **methodologies** for GHG inventories.

What does a Carbon Project Protocol include?

What is a forest carbon project?

CLIMATE
ACTION
RESERVE

Projects that are carried out in forest ecosystems where the carbon trees can be measured to generate carbon credits (verified and issued in a registry), which can be sold on the carbon market (voluntary or regulated).

Climate Reserve Tones (CRTs)

GHG removals and reductions registered in the Reserve system

1 CRT = 1 metric ton of CO₂e reduced or removed

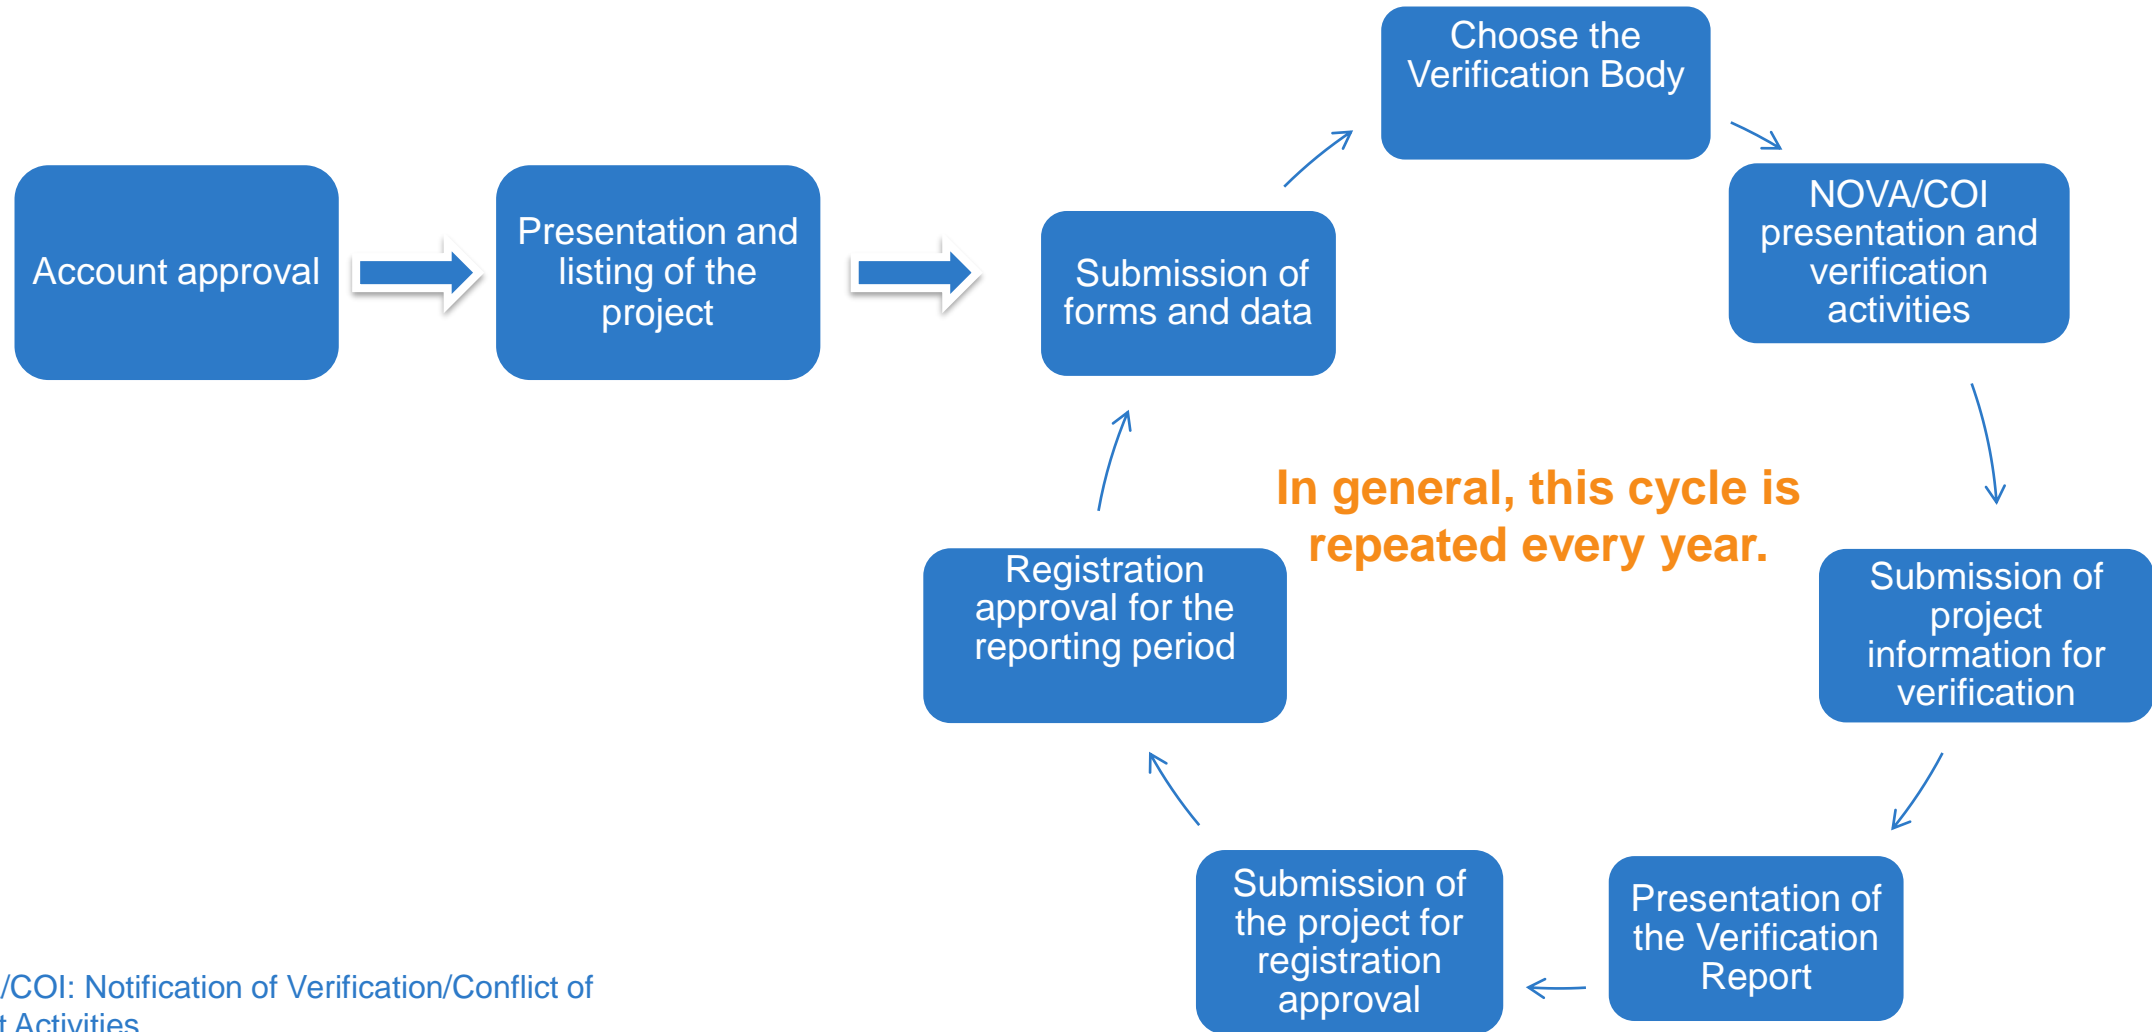

Each CRT has a unique identification number and one year of establishment (vintage)

Can be purchase/sold on the international voluntary market

1 credit = 1 ton of CO₂e = 3,944 km driven

The Life Cycle of a Project

*NOVA/COI: Notification of Verification/Conflict of Interest Activities

PROTOCOL DEVELOPMENT CONSIDERATIONS

Protocol Objectives

CLIMATE
ACTION
RESERVE

Ensure high quality carbon credits that guarantee the environmental and social integrity of the project.

Align the protocol with the laws and regulations of Guatemala.

Incentivize activities that increase carbon sequestration in the forestry sector.

Generate co-benefits (social and environmental).

Adapting the Forest Protocol to the Guatemalan Context

- Use the Mexico Forest Protocol as an initial basis for adaptation:
 - Facilitate the development process and reduce the time required
 - It has good acceptance in the market
 - There are more than 200 forestry projects in Mexico developed by local actors
 - It is standardized and has standardized quantification tools, which facilitates the development and verification of projects
 - Includes methodologies to reduce the costs of project development and verification
 - Includes social and environmental safeguards with robust methodologies
 - Includes a methodology of GHG quantification

Adapting the Forest Protocol to the Guatemalan Context

- The main changes will include:
 - Land tenure
 - Review of eligible activities
 - Evaluate additionality evidence to include Guatemalan laws, regulations, and context
 - Inclusion of native species in Guatemala in the quantification tools

ADAPTATION OF THE MEXICO FOREST PROTOCOL TO GUATEMALA

Definition of Forest Projects

A Forest Project:

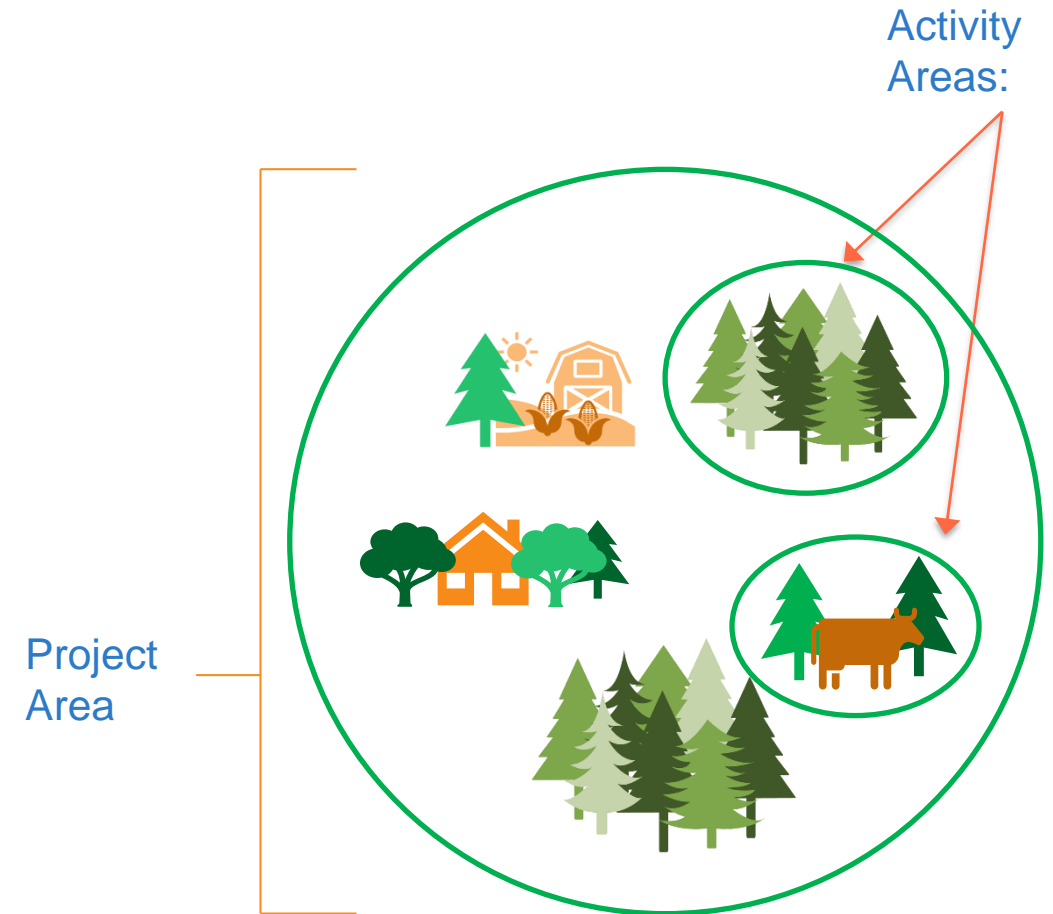

Forest activities that **increase CO₂ sequestration** and keep it stored over time.

The sequestered CO₂ must be **quantifiable, monitorable and verifiable** by an independent third party.

Project Area and Activity Area

- **Project Area:** Includes the entire area within a property (for example, an entire ejido)
- **Activity Area:** Specific areas where the defined activities that lead to a quantifiable increase in carbon stocks are carried out

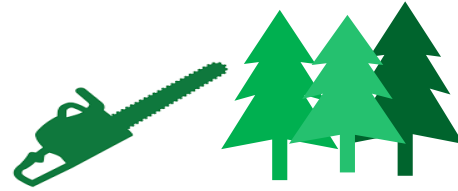

Project Activities Eligibility Criteria

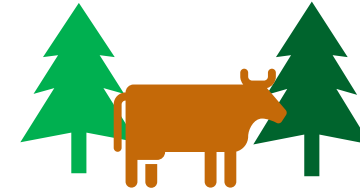

Eligible Activities Include:

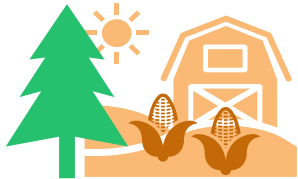

Reforestation

Improved Forest
Management

Silvopastoral systems

Agroforestry systems

Urban Forests

Restoration

Ineligible Activities Include:

Deforestation
avoided

Environmental Safeguards

CLIMATE
ACTION
RESERVE

All projects must:

Maintain or increase carbon inventories

Use native species

Do not clear cut in more than 5 ha continuous

Not decreasing forest cover in the Project Area

Maintain natural soil cover

Section 3: Social Safeguards

Requirements for compliance with social safeguards include:

Free, prior and informed consent

- Have one or a series of assemblies where project issues are discussed before the vote
- Have a vote to approve the project

Notification, Participation and Documentation

- Describe how assemblies are announced
- Have spaces for participation
- Publicly document assemblies

Project governance

- Identify a project coordinator to represent the community with the verifiers and the Reserve

Forest Project Coordinator

The Forest Project Coordinator is the link between the Reserve and the Forest Owner and ensures the correct implementation of the protocol requirements:

- For social ownership, must be a member of the community.
- For private property, it can be the owner or someone selected by the owner.

Project Developer

CLIMATE
ACTION
RESERVE

A Project Developer can be the Forest Owner or an independent third party contracted to assist in the implementation of the project:

The Forest Owner must give authorization to the Project Developer (unless it is the forest owner)

The Project Developer is not considered as the immediate owner or recipient of the credits or CRTs* (unless it is the same forest owner)

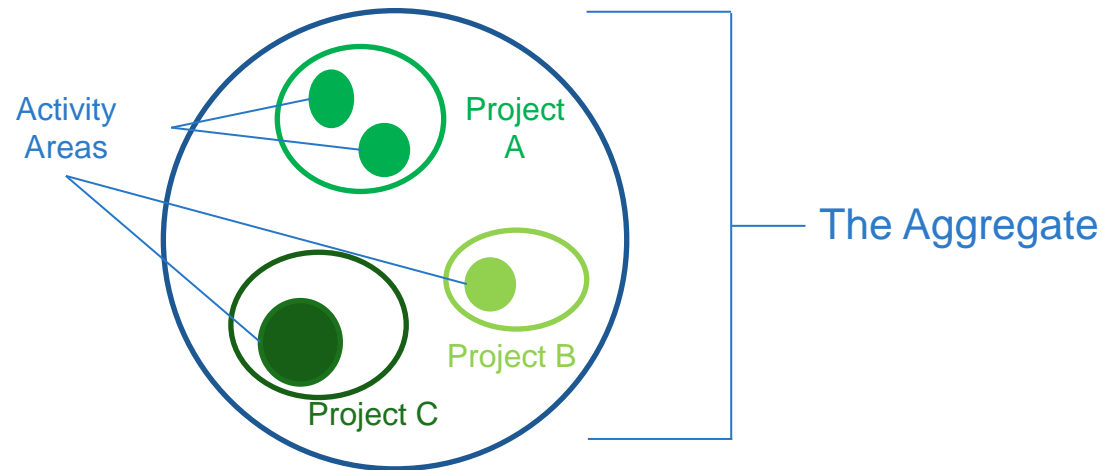

The Forest Owner is responsible for the accuracy and completeness of the information presented.

*CRTs: Climate Reserve Tonnes

Aggregation allows small projects to register as a group or as an “aggregate”:

- Economies of scale can help reduce costs
- Allow for marketing of CRTs at a volume
- The Aggregator must submit the documentation on behalf of the participants.
- The Forest Owner is responsible for the accuracy and completeness of the information presented and the fulfillment of the project requirements.

Section 3.12: Additionality

A forest project is considered additional if it would not have been implemented without the incentives of the carbon market:

- Forest Projects must comply with:

Legal Requirements Test:

- Carbon that is generated beyond legal regulations.
- Attestation (Declaration) of Voluntary Implementation.

Performance Test:

- Based on evidence that there are risks to carbon inventories and forest cover conversion
- Carbon that is above baseline is additional
- Different methodologies for each type of activity

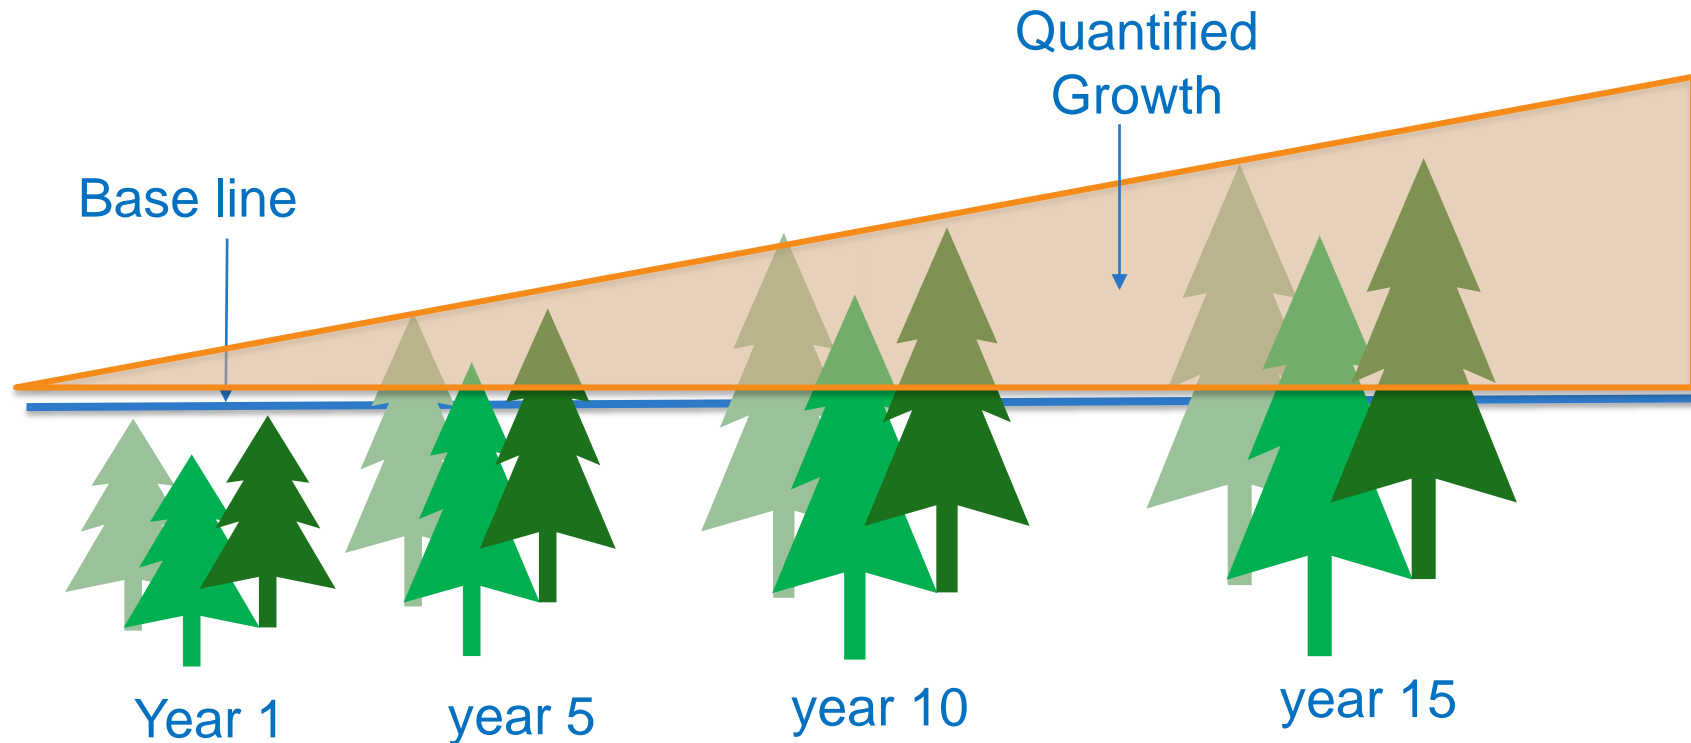

Quantification of Carbon Stocks

- Carbon stocks must be quantified within the Activity Areas
 - There are different methodologies according to the types of activity
- Activities of Improved Forest Management, Restoration, Reforestation, and Large Urban Forests must have a forest inventory in the field

Quantification of Carbon Stocks

- Existing inventory at the start date is considered as **the baseline**
- The **growth** after the start date is quantified for carbon credits

Forest projects must deliver climate benefits **permanently**:

- They must ensure that the tons of carbon are maintained for a defined period based on a permanence period of 100 **years**
- The maintenance of tons of carbon is guaranteed through the signing of a Project Implementation Agreement (contract)

Project Implementation Agreement

The **Project Implementation Agreement** is the contractual agreement between the Forest Owner and the Reserve:

- Establishes the obligations of the Forest Owner to comply with the requirements of the protocol
- The Forest Owner can define the commitment period
 - The Agreement can be renewed annually
 - Depending on the commitment period, the number of credits is stipulated

Unintentional Reversal

An **Unintentional reversal** that is not caused by the negligence or premeditation of a Forest Owner:

- For example: natural events such as fires and diseases
- To compensate:
 - The Forest Project contributes a percentage of CRTs to an **Buffer Pool** each year that credits are issued
 - The Reserve manages the Buffer Pool and will retire an amount of CRTs equal to the number of tons affected by an unintentional reversal
 - The Reserve returns a percentage of CRTs in the Buffer Pool over time to demonstrate ongoing compliance and project implementation

Intentional Reversal

An **Intentional Reversal** is one that is caused by the negligence or premeditation of a forest owner:

- For example: logging, development and damage to the Activity Area that reduces carbon stocks more than the total tons secured and issued as credits
- It is not covered by the Buffer Pool
- The Forest Owner is responsible for retiring a number of CRTs equal to the number of tons affected by the intentional reversal

- **The Project Submittal Form:** required to determine if the project meets the eligibility criteria
- **Project Report:** the main document describing the project and its compliance with the requirements of the protocol
- **Annual Monitoring Report:** the basis for reporting project updates annually
 - The carbon stocks must be updated each year. It requires the remeasurement of a percentage of the forest inventory.

Verification Cycle

The **verification** refers to the inspection and review of project data, reported information, and eligibility criteria:

The Initial Verification

- Full Verification (requires a site visit)
- Maximum 36 months from the start date
-

Complete verification

- Requires a site visit
- Required every 6 years
- Aggregated projects:
Required every 12 years

Desk Review Verification

- It is the optional annual verification of monitoring reports
- Required to receive credits prior to on-site verifications
- Less frequent for aggregated projects

SUMMARY AND NEXT STEPS

Timeline of protocol development

- ***For interested parties:***
 - **Submit the Statement of Interest (SOI) for the Work Group before April 7**
 - Send an email to receive updates as an observer
 - Send us your feedback at any time
- ***To the reserve:***
 - Formation of the workgroup
 - Start work on the draft protocol
 - First workgroup meeting, potentially April 26

QUESTIONS OR COMMENTS?
